# Saniflo **SFA**

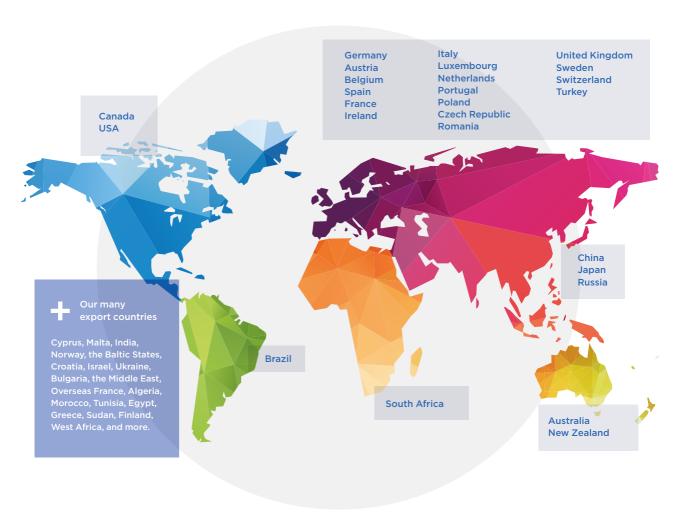

# SFA Group World leader in sanitary equipment

For over 60 years, the companies of the SFA Group have been working to provide our professional and end consumer customers with increasing levels of sanitary convenience in their daily lives.

# **An International Group**

Established in 25 countries across 5 continents, the Group continues to expand internationally through partnerships forged with professionals in the sector, carefully selected and trained to carry forward the reputation for performance, quality and service of the international Group.

# This is the very hallmark of the SFA Group!

It was this attitude and approach that brought about the release of the first Sanibroyeur in 1958. A brilliant idea that continues to revolutionise interior design around the world. This expertise in solutions has been put to use for many years, providing invaluable assistance across a wide variety of sectors.

# The SFA Group operates in 4 areas of activity:

- Domestic pumping solutions
- Professional pumping solutions
- Equipment for showers, balneotherapy and spas
- Water treatment.

# **Vision & Perspectives**

The Group's activity around pumps and pumping stations clearly illustrates its external growth policy.

This policy approach aims to protect and enhance expertise and resources. An initiative that builds a homogeneous block performing at an extremely high growth capacity.

By bringing in a technical expert like Zehnder Pumpen, recognised and well regarded in the market and a global player with a presence in over 70 countries, SFA has created the conditions to develop its innovation ability, reinforce its manufacturing base and ensure strong growth in this segment.

1958

2020

New visual image Format and Aquaturbo Systems purchase

Throughout its history, SFA has established a high-performing manufacturing base, opting for an integrated production strategy to build and assemble its equipment in record time. Its industrial model ensures complete control of each stage of production, quality control and manufacturing deadlines. This guarantee of reliability and trust is appreciated by its clients. The Group's commitment to quality is recognised internationally by independent laboratories. Each factory complies with the required standards of the certifications applicable in every country where its products are sold:

• CE marking in Europe • CSA certification marks in North America
PCT certification in Russia • JET standard in Japan

**BRÉGY** FRANCE

GRÜNHAIN-BEIERFELD,

Every day, some 300 employees work to bring our company values to life, to make things easier for our customers and our installers. Over the years, numerous investments have taken Brégy from being a simple assembly site to a largely self-sufficient production centre. To guarantee product quality from start to finish, we have vertically integrated the manufacturing of many components into our own production process.

Our 25 000 sqm factory is divided into four units to manage the production of composite and rubber parts, the manufacture of motors, the assembly of components and the creation of electronic components.

The Zehnder Pumpen company, purchased by SFA in 2019, has established itself as a recognised specialist brand in the production of submersible pumps, garden pumps, wastewater pumping stations, automatic domestic water dispensers or domestic water networks.

Historically, our two entities share the values of the French flagship of the sanitary industry: innovation, reliability, durability and performance.

### 2-YEAR WARRANTY

SFA pumps and macerators meet the European standards currently in force (EN 12050-3, EN 12050-2 and EN 12050-1) and are produced in a factory ISO 9001 and ISO 14001 certified.

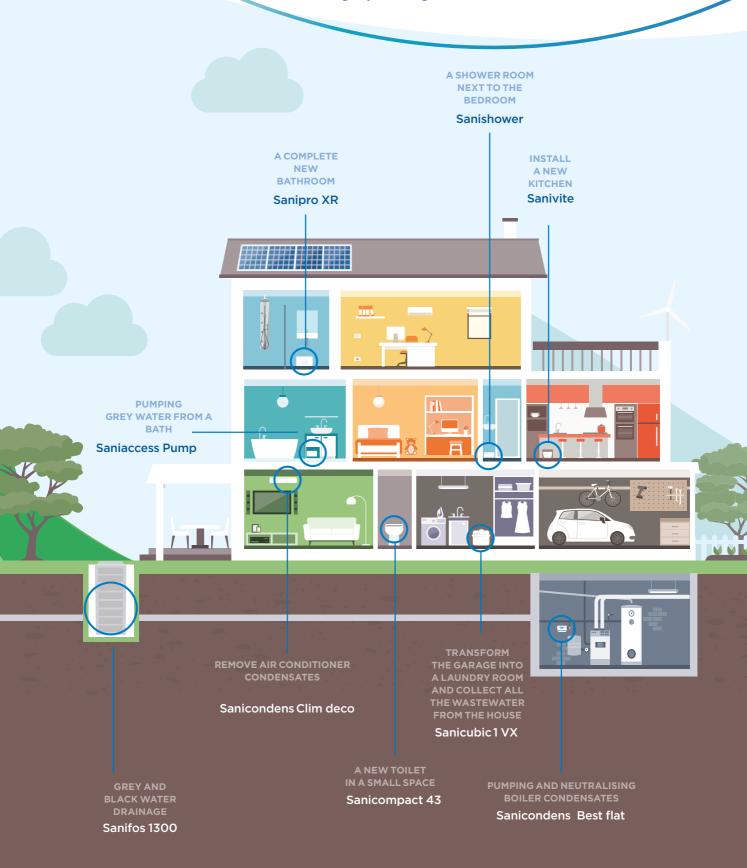

# What is a SANIFLO SOLUTION?

To adapt to the different stages of life, it may be necessary to modify and change your house by building an extension, or by adding an en-suite, additional bathroom or utility facilities. Saniflo products make it possible to carry out installation easily and without undertaking major building work.

If the additional new room is located at a distance from the main drainage system, perhaps in the attic, garage or in the basement, it is often easier and cost effective to use small bore pipework to create this new space rather than having to do major building work to connect to the main sewer.

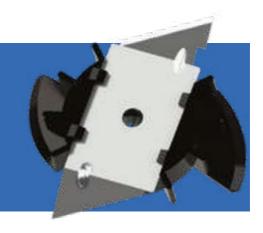

SFA macerators have remained at the forefront of technology since their invention, thanks to the group's continuous research and development efforts. Noise level, accessibility and design are all key elements to meet the needs of our customers.

# **OUR GRINDING TECHNOLOGIES**

# Single-blade cutter

The single-blade cutter reduces the black waste into fine particles. The rotating steel blade cuts through waste materials and discharges the water and waste at the same time.

# Multi-cutter disc

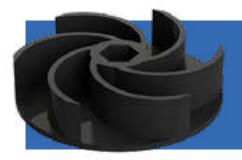

The multi-cutter disc uses a shredding action and acts as a turbine.

This technology is available in the Sanicompact.

# Pro X K2 impeller

The pro X K2 impeller is a more robust blade and has been designed to deal with the occasional obstruction such as a wet wipe, tampon, sanitary towel or condom.

# KX V6 Vortex impeller

SFA also has vortex technology. This technology is able to deal with particles of up to 50 mm, to meet the most demanding applications and creates a centrifugal action rather than a cutting blade.

# Two-channel wheel

The two-channel wheel sucks out and discharges grey water and particles without grinding them and provides 50 mm clearance for maximum performance.

# SOME RULES FOR INSTALLING AN SFA MACERATOR

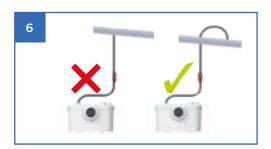

For the installation of connection elbows on the drainage piping, use  $2\times45^\circ$  elbows rather than one  $90^\circ$  elbow.

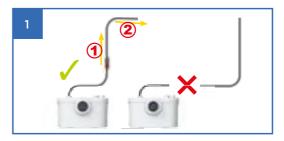

The larger radius curves DECREASE the discharge losses.

• If the discharge takes place in a direct downwards way, provide for an aerator valve placed at the highest point to avoid the siphoning phenomenon.

The macerator discharge pipe must be connected to the downspout from above, following the direction of flow.

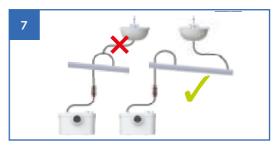

Vertical pumping must take place at the start of the DISCHARGE (1). From the highest point of the discharge (2), an incline of at least 1% is necessary.

between the sanitary appliances and the SFA macerator.

The appliance must not be installed **more** than 20 cm behind the toilet, nor at a lower level than the bowl.

No sanitary appliance must be connected to the small diameter drainage pipe **specific to the macerator.** 

WHY SANIFLO?

# The SFA Saniflo range for creating sanitary fixtures anywhere and without any major works.

For over 60 years, SFA has offered wastewater pumping solutions to facilitate property development.

Installing an SFA macerator lets you create sanitary fixtures anywhere in the house, even without gravity drainage!

A water supply, a small diameter discharge pipe and an electrical socket are all you need to install an SFA macerator.

# Descaler

To increase the lifespan of your appliance, you are advised to descale and clean the macerator and the bowl on a regular basis.

The special **Saniflo** cleaning descaler is perfectly designed to descale right inside your appliance and clean it while caring for its internal components.

# The descaler has 4 specific characteristics

- Specially designed to care for the rubber of the components
- A formula perfectly suited to small diameter drainage pipes
- Product suitable for septic tanks
- · Laboratory-tested formula and dosage

EAN 3308819899011

# **HOW IS THE DESCALER USED?**

Disconnect the power supply from the macerator.

Put a dose of descaler

Leave on for at least 2 hours.

Reconnect the power supply to the macerator.

Rinse away by flushing twice.

# **Sanialarm**

# An original concept

Occasional power outages, scaling of poorly maintained old appliances or even problems with clogged pipes, are all factors in significant variation of the water level permanently contained in an SFA macerator or pump.

To tackle this kind of unpredictability, SFA offers an efficient solution that provides instant alerts to avoid inappropriate use and take immediate action.

# How does it work?

The Sanialarm attaches to the cover of the SFA device. It consists of a level pressure switch which automatically activates the warning buzzer when the water volume exceeds the maximum permitted level. The alarm then produces an intermittent sound until it is silenced and the problem resolved.

### Reference EAN 3308810042799 ALARM

Works with all models in the SFA adaptable macerators range (previous and current), as well as the Sanispeed +. The Sanialarm works with 2 1.5V batteries (not supplied)

# Easily install the Sanialarm

Insert 2 standard 1.5V batteries (not supplied) into the unit.

Drill a 10 mm diameter hole in the location shown on the appliance hood.

Coat with silicone grease before Attach the Sanialarm inserting the pressure switch tube of the Sanialarm.

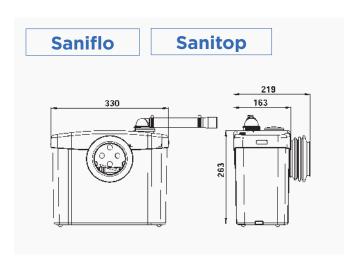

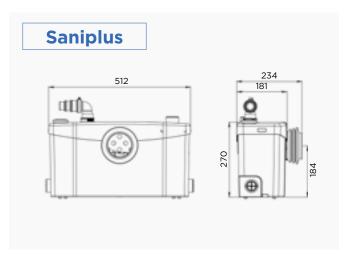

inside the opening of the tube.

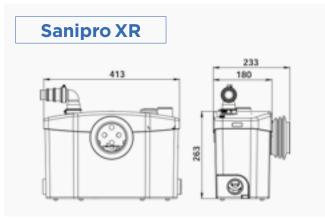

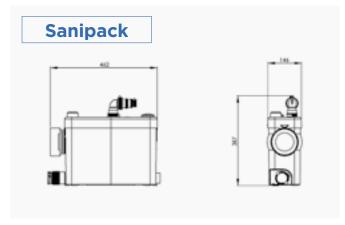

Switch to the ON position.

WHY SANICOMPACT?

# **Comfortable and reliable** with a contemporary design, the products in the Sanicompact range are the solution for installing sanitary fixtures in small spaces.

In order to meet expectations in terms of space planning, SFA has expanded its range of macerators. When the space available for fitting out new sanitary fixtures is reduced, the Sanicompact range is an aesthetic and efficient answer.

Equipped with an integrated macerator, these ceramic bowls\* are space-saving. Floor-mounted or wall-hung, these solutions are ideal for fitting out a studio, closet or space under the stairs. They also provide an option to connect a washbasin in addition to the toilet.

- PRODUCTS WITH A CONTEMPORARY DESIGN AND EQUIPPED WITH SILENCE TECHNOLOGY
- AN ENVIRONMENTALLY-FRIENDLY RANGE:
  WATER AND ENERGY EFFICIENT THANKS TO THE DUAL FLUSH SYSTEM
- COMFORT OF USE WITH THE SOFT-CLOSE TOILET SEAT AND LID
- GUARANTEED HYGIENE THANKS TO THE ANTI-LIMESCALE CERAMIC AND AN ANTIBACTERIAL LID

# **HOW TO INSTALL A SANICOMPACT?**

To install the Sanicompact you must have: a water inlet + a water outlet + a power socket.

Connect your Sanicompact to the cold water supply pipe.

Connect the Sanicompact drainage elbow to your PVC pipe and connect it to your main drain.

Connect the Sanicompact to your 230V socket: and it works!

# **HOW DOES IT WORK?**

Pressing the flush button starts a new program, firstly activating the bowl rinse.

Finely ground matter is expelled. A check valve prevents the return of wastewater.

The macerator is ready for use again.

WHY GREY WATER PUMP?

SFA designs grey water pumps solutions that are easy to install, with no major works needed. Among these is the domestic pumps range, ideal for easily creating a new bathroom, kitchen, or laundry room.

SFA pumps help you to create a new bathroom, kitchen or laundry room wherever you want in the house, even in the absence of gravity drainage.

Easy to install, these small size pumps can be placed inside a cabinet. They are also extremely quiet. An ideal solution for creating an additional shower room and increasing privacy when friends are visiting or your family grows. What's more, this investment also increases the property's value. In fact, it is estimated that creating an additional shower room increases a property's value by almost 10%.

> Easy to maintain: replaceable detection module.

Installation with no major work: little disbursement; small diameter drainage (32 mm).

> Heavy flow (30 L/min): compatible with rainfall showers.

A walk-in shower, anywhere, without major work.

Easy maintenance thanks to the removable and cleanable hair filter (no screws).

#### PLUGHOLE FEATURES

**Outlet diameter** 

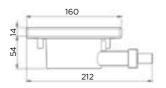

16 mm

The Sanifloor+ range offers 3 plughole versions for all the floor coverings on the market:

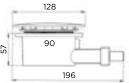

- Sanifloor+ 1 for tiled floors
- Sanifloor+ 2 for flexible floors
- Sanifloor+ 3 for standard shower trays with 90 mm plughole

TOTAL HEIGHT			
1. Plughole for tiled floors	68 mm		
2. Plughole for flexible coverings	68 mm		
3. Plughole for standard shower trays with 90 mm plughole	57 mm

REFERENCE EAN 3308815012216 CLIMDECO2

This is why SFA provides a range of condensate evacuation pumps: for gas and oil boilers, for small kitchen boilers as well as for large capacity boilers (up to 80 kW).

According to legislation, condensates emitted by combustion appliances must only flow out via drainage systems resistant to wastewater with a pH value below 6.5.

These pumps are also compatible with heat pumps and thermodynamic flasks

National and local regulations may require pre-treatment of condensates

SFA therefore also offers a whole range of condensate neutralisation systems, either integrated into the pump or not.

# The functions of the grease traps and separators.

Every restaurant produces wastewater full of fatty and oily matter, of animal or vegetable origin. They result in high levels of deposits in pipes. These deposits disrupt the proper functioning of water drainage networks and treatment plants.

By installing a grease separator, macro-waste and greases are retained at the source. Therefore, it avoids any damage to water and public sanitation equipment.

Article L 13 31 10 of the new Public Health Code stipulates that: "Any discharge of wastewater other than domestic, into public sewers, must have been authorised beforehand by the community owning the works that this water will pass through before reaching the natural environment". Sanitation and the departmental health regulations must specify the rules for the management of fatty waste, namely the installation of a pre-treatment system. We are also seeing that more and more cities are imposing this in their municipal by-laws.

#### Calculation method according to standard NF EN1825-2

For grease separators with a sludge tank, the calculation method according to standard NF EN1825-2 is as follows:

NS = No. meals x V meals x df x tf x fr x  $\frac{fq}{(3,600 \text{ x daily operational time)}}$ 

df: Density factor; tf: Temperature factor; fr: Detergent factor; fq: Peak factor.

To maximise performance, daily maintenance of grease traps is required. For grease separators, monthly maintenance is needed.

# Grease traps and separators

	Commercial	Nominal Size (NS)	Examples of use
Sanigrease T Grease trap	74		Mobile food trucks     Mobile dishwasher     Commercial dishwasher     Occasional food preparation
Sanigrease T 24  Grease trap available in 4 sizes	75		• Restaurant, hotel and canteen kitchen sinks

#### **DETERMINE THE PEAK FLOW**

This is the amount of water to be drained according to the type and number of sanitary fixtures connected to the pumping station.

The flow measures a volume per unit of time. It is expressed in cubic metres per hour  $(m^3/hr)$  or litres per second (L/s).

#### **ESTIMATED FLOW**

On the basis of 1 residence comprising: 1 toilet, 1 bath, 1 shower, 1 washbasin, 1 sink, 1 washing machine, 1 dishwasher

Number of residences	Flow
1 residence (1 to 3 inhabitants)	2.5 m³/hr
Up to <b>2 residences</b> (4 to 6 inhabitants)	5 m³/hr
Up to <b>4 residences</b> (7 to 9 inhabitants)	10 m³/hr
Up to <b>6 residences</b> (10 to 12 inhabitants)	15 m³/hr

# CALCULATING THE TOTAL DYNAMIC HEAD (TDH)

TDH IS THE PRESSURE THAT THE PUMP MUST PROVIDE BETWEEN THE SUCTION POINT AND THE DISCHARGE POINT.

#### TDH = GEO H + H v

#### Geo H = Geometric height

This is the height of the discharge in metres.

H v = Total discharge losses in the discharge pipe (expressed in metres of water column).

#### There are 2 types of friction loss:

- regular (or linear) friction loss:
   these result from the friction of the fluid against the walls of the discharge pipe
- the singular discharge losses by friction: they come from accidents related to pipes (elbow, check valves, etc.)

These have to be added to the geometric height to determine the total dynamic head.

The value obtained in this table must be multiplied by the total length of the drainage pipe to obtain the total loss of loads.

#### TABLE OF DISCHARGE LOSSES

-1	ı	DN PN I	0 press	ure PVC	piping	
Flow in m³/hr	DN 32 36.2/40	DN 32 DN 40 36.2/40 45.2/50		DN65 67.8 / 75	DN 80 81.4/90	DN 100 101.6/110

# LIFTING STATION

Once the total dynamic head and the peak flow have been determined, the pump's typical curve can determine its suitability for requirements.

The volume of the tank will then be determined in accordance with the specific constraints of each installation.

#### CASE STUDY

2 residences are connected to one lifting station.

The station must discharge wastewater at a height of 4 m over a total pipe length of 10 m in PVC with an diameter exterior of 50 mm.

- Geometric height: 4 m.
- Table of discharge losses: for 2 residences, we estimate the flow at peak times to be 5 m<sup>3</sup>/hr.

According to the discharge losses table, the height is:  $0.019 \times 10=0.19 \text{ m}$ 

- → Therefore, the total dynamic head will be: 4 m + 0.19 m = 4.19 m
- → The project therefore presents the following criteria: TDH = 4.19 m and Flow = 5 m³/hr
- Our client wants to install an underground pumping station in his garden.

The Sanifos range corresponds to his needs.
His installation constraints dictate a 280 litre tank.

Analysis of the pump performance curve for the Sanifos station confirms to us that the Sanifos 280 station meets the needs of the installation.

## HYDRAULICS

# Floor-standing lifting stations

#### WHY SANICUBIC?

Since it is not always possible to install an underground lifting station, SFA offers the Sanicom and Sanicubic ranges!

These are pumping stations that can simply be placed on the ground for easy installation and maintenance.

Sanicom is for pumping grey water, while Sanicubic pumps both grey water and black water.

	Individual	Commercial	Collective	Examples of use
Sanicom 1 Grey water	P.82	~		Bakeries, laboratories, smoothie bars: pumping for sinks, bars, dishwashers, glass washers Hair salons: pumping for hair disposal trays in hair salons Gymnasiums, restaurants, dental and veterinary
Sanicom 2 Grey water	P.83	~		practices: water pumping from sanitary facilities with sinks, showers and urinals Bread oven: high temperature condensates drainage Boiler room and softeners: grey water drainage Production water drainage
Sanicubic 1 Wastewater Sanicubic 1 WP Wastewater	R84 /			
Sanicubic 2 Classic Wastewater Sanicubic 2 Pro Wastewater	R86	\( \times \)		Entire detached house: wastewater drainage     House extension or pool house design:     wastewater drainage     Factory extension (design of sanitary fittings, toilet, sinks and urinals): wastewater drainage     Site base camp, cultural events: wastewater drainage     River developments, floating chalets, barges: wastewater drainage
Sanicubic 1 GR Wastewater Sanicubic 2 GR Wastewater	P.88	V		wastewater uraniage
Sanicubic 1 VX  Wastewater  Sanicubic 2 VX  Wastewater	P.92 P.94	V V	V	Apartments: pumping starting from     2 apartments on the same station     Bars and restaurants: wastewater drainage     Stadiums: wastewater drainage
Sanicubic 1 SC Wastewater Sanicubic 2 SC	P.96	V	V	Hotels, camp sites, offices: wastewater drainage     Boats: wastewater drainage

### underground lifting station

**SOME INSTALLATION TIPS** 

DIFFERENT FACTORS MUST BE CONSIDERED AND COMPLIED WITH DURING THE INSTALLATION OF THE SANIFOS UNDERGROUND LIFTING STATION.

Standards: Our devices comply with the EN12050-1 standards of lifting stations for all waters and must be installed following the recommended guidelines of the EN 12056-4 and EN 752-6 standards.

\*For accurate technical information, please refer to the installation instructions and professional standards or seek advice from our technical service.

## 1 TYPE OF SOIL

Before installing an underground lifting station, it is essential to be fully aware of the soil type. Sanifos lifting stations can also be installed inside the home, in a floor standing position.

# WHERE TO INSTALL YOUR LIFTING STATION?

Sanifos lifting stations have an incoming water flow height of 182 mm to 2,450 (and of 2,940 mm with the extension), allowing for installation at various distances from the house.

# WHY DOES YOUR STATION NEED GOOD VENTILATION?

Ventilation must be installed in the upper part of the station for it to operate correctly.

- drain the gases that gather inside the tank
- avoid depressurising the stations
   To do this, the lifting stations
   have ventilation openings.

**WHY SANIFOS?** 

### **Sanifos**

- for reliable pumping.

In addition to its Sanicubic floor standing lifting stations, SFA also offers a wide range of Sanifos underground lifting stations:

- 1 PUMP AND 2 PUMP MODELS
- SINGLE-PHASE AND THREE-PHASE MODELS
- GRINDER, VORTEX AND TWO-CHANNEL MODELS

These stations meet diverse requirements such as individual, commercial or small collective use.

## ADVANTAGES OF SANIFOS LIFTING STATIONS

#### Reliability

- Rotation-moulded polyethylene high-density tank with high mechanical resistance, anti-odour, resistant to chemical attacks and UV rays.
- Thermal motor protection.

#### **Flexibility**

- Several inlets of various diameters available.
- Ventilation openings.

# Easy installation and maintenance

- Station delivered fully equipped (pre-assembled hydraulic connections with gate valves and check valve).
- Cable gland for cable passage.
- Chain supplied as standard for pump output.
- Control unit included with Sanifos models with 2 pumps.
- Watertight terminal blocks supplied as standard (Sanifos 610 and 1300 models).

# Underground lifting stations

To save space in the house, and for discreet operation, SFA offers a full range of underground lifting stations: Sanifos. With a macerator or vortex, one pump or two, single-phase or three-phase motors, this range meets every need.

## Sanifos 1300 single-phase Sanifos 1300 Three-phase

Wastewater pumping

Installation of two pumps on cast iron support bases with stainless steel guide bars for easy maintenance.

Extension accessory available for greater installation flexibility.

> Vertical drilling area for effluent inlet with template provided.

Discharge level compatible with frost-proof installation.

Self-cleaning sloped tank bottom.

2 pumps running alternately for long-lasting, safe operation.

Supplied with SMART unit: interactive, intelligent station monitoring system.

## **Ethics Charter**

# "ENSURING THAT BUSINESS ETHICS IS CENTRAL TO RESPONSIBLE GROWTH."

#### **OUR SFA GROUP COMMITMENT**

SFA is an industrial group with a Worldwide presence, whose primary objective is simple: to design and manufacture domestic and professional solutions wherever water flows.

Our ambition is to continue to GROW TOGETHER with all our partners and stakeholders (all those who participate in our business life, those who view the company, and those that we influence either directly or indirectly), in a common approach of development and permanent progress.

 $\bigcirc$  The commitment to respect guides our relationships with all our stakeholders and must be a permanent part of our activities and our business relationships. Recognition of individual difference must be taken into consideration and go beyond minimum compliance with laws and regulations.

Respect is at the heart of human interaction, not only within SFA and towards our clients, but also in our social and wider environments.

We respect individuals and their right to privacy.

- Our commitment to integrity leads us to strictly respect our duty of honesty in our business relationships. It requires all of us; management in particular, to lead by example in fulfilling our duties to our clients, colleagues and all other stakeholders.
- Our quality commitment is to provide our customers with a quality service. Quality applies to all business sectors and everyone plays a role and contributes to achieving this goal. Our ambition is to be recognized and approved by all our stakeholders as we grow together.
- OThe Team spirit that inspires us encompasses solidarity and cooperation. This means that we can combine the best skills for the benefit of our customers and stakeholders, and together overcome the challenges we face today and in the future.

Our principles of action and conduct are in accordance with fundamental principles, such as those of the Universal Declaration of Human Rights, of modern slavery law and those set by the International Labour Organisation (especially those concerning prohibition of child labour and forced labour).
